

# Bike Tracking System

Authors: Musa Azeem, Ethan Adams, Angela Alaisa, Danai Angelidis

## Problem statement:

Our users struggle with maintaining the location of their locked bikes and often suffer from theft. Our solution should enable users to track the location of their bikes through a GPS system in order to always know where they left it and to find out where a thief may have taken it.

## Who is experiencing the problem?

Every day commuters who ride and want to easily manage their bike.

## What is the Problem?

There is no current method to constantly track the location of bikes.

## Where does the problem present itself?

During every commute.

## Why does it matter?

People value their property and do not want to waste time searching for it.
